

VIVEK RANJAN

SUMMARY

Quality Engineering Leader with 14+ years of experience driving automation and QE transformation across Telecom, Healthcare, and financial domains. Proven track record of leading teams (15–20 members), optimizing regression cycles, and improving release speed, quality, and predictability.

Expert in building scalable automation platforms, CI/CD-driven quality gates, and intelligent testing solutions including risk-based testing, execution analytics, and automated defect management. Currently driving validation of financial workflows including Lease Rewrites and Recurring Payments. Strong in stakeholder management, Agile delivery, and cloud-based QE practices (AWS).

LEADERSHIP & IMPACT HIGHLIGHTS

- Led QE initiatives across Telecom, Healthcare, and Financial programs, managing teams of 15–20 engineers
- Reduced regression cycle time by ~30–40% through automation, parallel execution, and CI/CD integration
- Improved release quality through API and backend validation strategies
- Built intelligent automation solutions including RAG-based execution analytics and defect de-duplication
- Defined automation roadmap, QE governance, and quality metrics
- Partnered with stakeholders to align quality strategy with business goals.
- Drove adoption of AI-assisted tools to improve team productivity
- Designed B2B SaaS automation frameworks for enterprise clients, embedding compliance validation across financial workflows to ensure accuracy, reliability, and regulatory adherence.*

EXPERIENCE

Technical Lead - QA Automation, 04/2022 - Current Tech Mahindra

- Led end-to-end automation strategy for Salesforce QE program, managing a team of ~18 engineers across multiple releases
- Led validation of critical financial workflows including Lease Rewrites and Recurring Payments, ensuring data accuracy, billing integrity, and end-to-end transaction reliability
- Delivered 1000+ automated regression scenarios, reducing manual effort and improving release turnaround time by ~35–40%
- Designed scalable Selenium + TestNG automation framework with parallel execution, improving execution efficiency and stability
- Established API automation strategy using REST Assured, enabling early defect detection and reducing production leakage
- Implemented CI/CD pipelines using Jenkins, enabling continuous testing and faster feedback cycles
- Introduced Selenium 4 CDP capabilities for network monitoring, API interception, and performance validation, reducing flaky test failures

PERSONAL DETAILS

Address: Pune, India

Phone: +91 - 7507416993

Email: vivek.ranjan.srm@gmail.com

LinkedIn: <https://www.linkedin.com/in/vivek-ranjan-profile>

GitHub: <https://github.com/VIVEKSRM>

Portfolio: <https://vivekranjan.in/>

SKILLS

Quality Engineering & Automation

- Selenium WebDriver, Playwright (working knowledge)
- REST Assured (API automation)
- TestNG, Cucumber (BDD)
- Automation Framework Design & Architecture

Programming

- Core Java (OOP, Collections, Multithreading)
- Shell Scripting
- JS/TS (working knowledge)

DevOps & Tools

- Jenkins, Docker, GitHub, Maven
- CI/CD Pipelines, JIRA

Cloud

- AWS (working knowledge)

Leadership & Strategy

- QE Transformation
- Automation Strategy & Roadmap
- Stakeholder Management
- Agile Delivery Leadership
- Program Delivery & Governance

- Integrated JIRA REST APIs for automated defect creation and reporting, improving defect tracking efficiency
- Defined QE governance including test strategy, automation coverage planning, and coding standards
- Collaborated with business stakeholders, product owners, and architects to identify quality risks and improve delivery predictability
- Mentored team members on automation best practices, framework design, and coding standards
- Designed and developed a custom automation analytics dashboard ("Honeycomb Reporting Tool") to provide feature-level execution insights using RAG (Red-Amber-Green) status, enabling risk-based testing and focused validation, significantly reducing redundant test efforts and improving defect detection efficiency
- Implemented risk-based testing approach using automation insights, enabling teams to prioritize high-risk features post execution and optimize overall testing effort and coverage.
- Optimized automation execution using Docker-based parallelization, reducing regression suite time by ~40%, and introduced intelligent defect management with log-based validation to auto-create and de-duplicate defects, improving triage efficiency

Assistant Manager, 08/2012 - 04/2022
Accenture

- Led automation delivery for large-scale Telecom programs, managing end-to-end planning, estimation, and execution
- Automated 2000+ test cases across VAS/VATS and enterprise applications, improving regression coverage and efficiency
- Automated complex Telecom billing workflows including CDR validation, rating (OBRM), reconciliation, and financial transactions
- Developed reusable automation libraries and modular frameworks, improving scalability and reducing maintenance effort
- Collaborated with DevOps teams to integrate automation into CI/CD pipelines, reducing regression cycle time
- Improved billing accuracy for 1M+ B2C customers by automating reconciliation workflows.
- Led transition of Network Verification Testing (NVT) from Philippines to India, establishing and scaling an 8-member team, and driving automation of NVT workflows using Selenium and shell scripting to improve execution efficiency and reduce manual validation effort
- Presented automation innovations at organization-level forums, showcasing domain expertise in OSS/BSS and CRM systems

ACCOMPLISHMENTS AND AWARDS

- ACE Award (TechM – 2026)
- Bravo Award (TechM - 2025)
- Standing Ovation Award (TechM – 2023, 2024)
- Pat On Back (TechM – 2022, 2025)
- Automation Hackathon Winner (Accenture - 2021)
- Accenture Celebrate Excellence Award (Accenture ACE- 2016, 2019)
- Accenture Stellar Award (Accenture - 2017)
- "Best white paper award" in CMT testing (Accenture - 2015)
- Multiple Excellence & Delivery Awards – Accenture (2015–2021)

- Test Governance & Quality Metrics

AI in Testing

- GitHub Copilot
- Claude AI (POC usage)
- AI-assisted test development

EDUCATION

Executive MBA (EPYM-16), Management, 2016-17
IIM - Kolkata, WB

B.Tech (Full Time), Electronics and Instrumentation, 2008-12
SRM University - Chennai

CERTIFICATIONS

- Salesforce Certified Administrator (SCA)
- Salesforce Certified AI Associate
- AWS Certified Solutions Architect – Associate
- ISTQB Foundation Level Certified
- Azure Fundamental
- Automation Prime Certified
